Mobile phone scenarios

Importance of the mobile phone

- The smartphone is already an important working tool and it will be even more central in our life, both private and job related
- In the long term, many of today's PC online activities will be complemented through the mobile phone or migrate to the mobile phone altogether, due to greater convenience and faster connection speeds
- Outside home, the mobile phone will be the dominating Internet platform in 1-2 years from now

by Todd Huffman

Mobile phone scenarios

Identification

- The SIM card (the mobile phone card) can be used as a base for valid identification. Within EU there are official tests and reports done.
- Passing gates instead of using identification card
- As a method for sign on to systems and possibly vehicles

by [The_Ray_Family](#)

When talking about identification there are some security issues to be solved such as knowing that the SIM card can't be copied and can't be falsified and that the holder of the mobile phone is really the owner of the sim card.

Mobile phone scenarios

Navigation

- Where are you? (child control)
- Where am I now and how do I get to address X?
- Where is the nearest free parking spot, restaurant, gas station etc?
- Find my car at the parking place

by perry williams

by Aerial Photography

Disney did recently announce their Disney Mobile, where locating the child is one of the offered services together with call control and other family features.

Mobile phone scenarios

Remote control

- Start the **car heater** when needed instead of presetting the time
- **Open** the car door, the garage door or the home entrance door
- **Control various system** such as heater, air condition etc.
(Unfortunately, terrorist bomb attacks are often released by a mobile phone)

Mobile phone scenarios

Health care

- Measure blood pressure and other body functions. Giving early warnings.
- Remote rough diagnostics from doctor and e-recipe sent to the mobile for delivery at the drugstore
- Road side assistance, including video support

Mobile phone scenarios

Need for better input/output features

Input and output on small devices is still a limitation.
Some examples of new solutions:

Projector display

Separate flexible display

Virtual keyboard

LET'S MAKE SURE.

Mobile phone scenarios

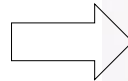

Summing up

- The mobile phone is already a **central communication tool** for both business and private use. This will be even more true in the future.
- A variety of functions and services will be offered and make the mobile phone to **replace the wallet, the identification card, the credit cards and much more**

Don't drop your mobile phone!
